

# Brembo Wheel Fitment Instructions

sales@autohaustexas.com - <http://www.mercedes-benz-auto-parts.com>

This is a cut out from the other PDF file you should have downloaded along with this file.

Please paste the other PDF file to a stiff peice of cardboard and then cut out the shape of the caliper as show here.

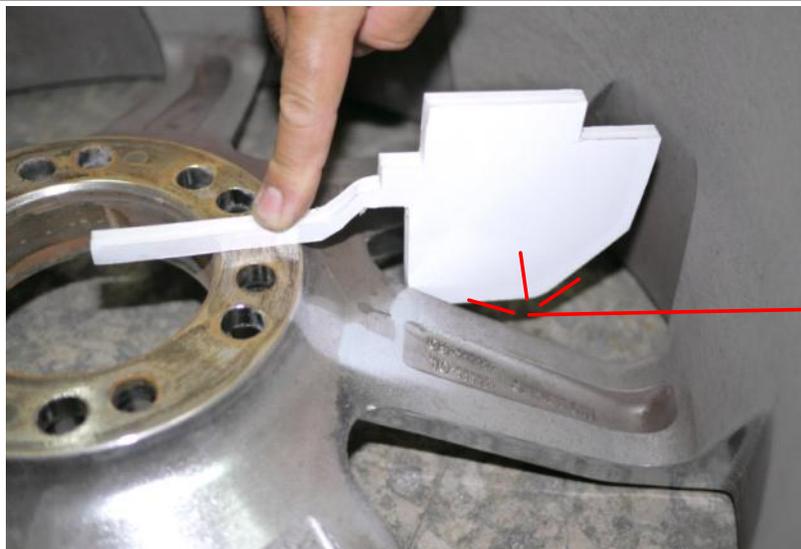

Be careful not to distort the shape of the caliper diagram when you do this.

\*Note - sometimes printers will resize the document when you print it

The bottom of the cutout should be positioned at the center point of the wheel.

"All measurements are taken from the back side of the hub, with the wheel off. Use the center point of the wheel to measure. "

Dimensions listed are of a brake system, Brembo recommends a minimum of 3mm clearance between the caliper and the wheel spoke or rim.

In this example, one does not have enough room between the face of the caliper and the spoke of the wheel. Therefore other wheels or a spacer must be used.
